

02 OCT 1967

MEMORANDUM FOR: Director of Communications
Director of Logistics
Director of Security

SUBJECT : Coordination of Antenna System Requirements
at Headquarters

1. It has recently come to my attention that several Agency components are considering the installation of new facilities at Headquarters to provide means for monitoring radio transmissions, such as broadcast activities in the commercial broadcast and international shortwave bands, local television channels, and police channels.
2. When considered on an individual basis, these installations appear to be straightforward and inexpensive. Each installation, however, consumes rooftop space, poses a potential interference problem to existing antennas, and requires the use of existing conduit distribution facilities within the building. A number of existing space conduits will be required for distributing future secure voice circuits. It is essential, therefore, that the use of these conduits for other purposes be carefully evaluated.
3. I would like for you to be a member of the reviewing committee, with the Director of Communications as the Chairman, to coordinate on all such requirements for antenna installations and utilization of related distribution facilities at Headquarters.

R. L. Bannerman
